(a) Contrast-dependent shell requirement
Backward-integral retention
Remaining high-index A domains
470 nm, $n_A/n_B = 1.55$
580 nm, $n_A/n_B = 1.129$
(b) Forward redistribution
Integral relative to intact sphere
Remaining high-index A domains
470 nm forward
580 nm forward
470 nm backward
580 nm backward
(c) 470 nm design, $n_A/n_B = 1.55$
Backward-collected efficiency
Wavelength [nm]
60 A domains
13 A domains
5 A domains
0 A domains
(d) 580 nm design, $n_A/n_B = 1.129$
Backward-collected efficiency
Wavelength [nm]
60 A domains
31 A domains
5 A domains
0 A domains
